ELSEVIER

Ecological Modelling 92 (1996) 293–294

ECOLOGICAL MODELLING

Contents of *Ecological Modelling*, Vol. 92

VOL. 92 NO. 1 — 21 NOVEMBER 1996

Review

Modeling the effects of temperature on growth and persistence of tree species: A critical review of tree population models
H.J. Schenk (Santa Barbara, CA, USA) 1

Regular papers

Effective variables in ecosystem models with an application to phytoplankton succession
K.-W. Wirtz and B. Eckhardt (Oldenburg, Germany) 33

Effect of time-varying cross-diffusivity in a two-species Lotka–Volterra competitive system
S. Raychaudhuri, D.K. Sinha and J. Chattopadhyay (Calcutta, India) 55

Individual differences make a difference in the trajectories of simulated schools of fish
W.L. Romey (Binghamton, NY, USA) 65

Modelling of Geo-Biosphere Processes

Modelling the effect of grazing on infiltration, runoff and primary production in the Sahel
L. Stroosnijder (Wageningen, Netherlands) 79

A minimal model of interaction between climate and vegetation: qualitative approach
Y.M. Svirezhev and W. Von Bloh (Potsdam, Germany) 89

Classifying soil structure using neural networks
E.R. Levine, D.S. Kimes (Greenbelt, MD, USA) and V.G. Sigillito (Laurel, MD, USA) 101

VOL. 92 NO. 2 — 1 DECEMBER 1996

Special Issue

Ecological Resource Modelling

Introduction 109

I. Population Models

An interdisciplinary approach to understanding nonlinear ecological dynamics
J.M. Cushing (Tucson, AZ, USA), B. Dennis (Moscow, ID, USA), R.A. Desharnais (Los Angeles, CA, USA) and R.F. Costantino (Kingston, RI, USA) 111

Modelling the biological control of insect pests: a review of host–parasitoid models
N.J. Mills and W.M. Getz (Albany, CA, USA) 121

Modeling and managing the evolutionary component of biological systems
T.L. Vincent (Tucson, AZ, USA) 145

Modeling effects of chemicals on a population: application to a wading bird nesting colony
T.G. Hallam (Knoxville, TN, USA; Trieste, Italy), T.L. Trawick (Carrollton, GA, USA) and W.F. Wolff (Julich, Germany) 155

II. Risk and Uncertainty

A contagion model of a fishery and its use in analyzing catch–effort data
W.J. Reed and C.M. Simons (Victoria, B.C., Canada) 179

Viability analysis of endangered species: a decision-theoretic perspective
R. McKelvey (Missoula, MT, USA) 193

Lack of predictability in model ecosystems based on coupled logistic equations
H.M. Hastings, D.J. Rumignani, A.G. Vassalotti, M.T. Weiss and Y. Wu (Hempstead, NY, USA) 209

III. Bioeconomics

Controlling transboundary wildlife damage: modeling under alternative management scenarios
M.G. Bhat (Miami, FL, USA), R.G. Huffaker (Pullman, WA, USA) and S.M. Lenhart (Knoxville, TN, USA) 215

Optimising the offtake of large herbivores from a multi-species community
J. Hearne, R. Lamberson (Pietermaritzburg, South Africa) and P. Goodman (Mkuze, South Africa) 225

A technique for finding optimal two-species harvesting policies
M. Mesterton-Gibbons (Tallahassee, FL, USA) 235

A back of the envelope calculation method for calculations of the gains from genetic progress in forestry with some theoretical underpinning
K.-G. Löfgren (Umeå, Sweden) 245

IV. Intertemporal Tradeoffs

Why economists discount future benefits
K.S. Lyon (Logan, UT, USA) 253

Discount rates and sustainable development
R.B. Howarth (Santa Cruz, CA, USA) 263

Futher comments

Discount rates and sustainable development: reply
R.B. Howarth (Santa Cruz, CA, USA) 271

Discount rates and sustainable development: comment
K.S. Lyon (Logan, UT, USA) 273

The last word

The swamp and the shopping center: an interest rate parable
P. Berck and E. Ligon (Berkeley, CA, USA) 275

V. Modeling and Advocacy

Resource modeling moves into the courtroom
G. Swartzman (Seattle, WA, USA) 277
